Find the Median

In the Quicksort challenges, you sorted an entire array. Sometimes, you just need specific information about a list of numbers, and doing a full sort would be unnecessary. Can you figure out a way to use your partition code to find the *median* in an array?

Challenge

Given a list of numbers, can you find the median?

Input Format

There will be two lines of input:

- *n* the size of the array
- ar n numbers that makes up the array

Output Format

Output one integer, the median.

Constraints

- $1 \le n \le 1000001$
- *n* is odd
- $-10000 \le x \le 10000, x \in ar$

Sample Input

7 0124653

Sample Output

3
